■ Application information

● Setting the Input Capacitor and the Output Capacitor

Input capacitors (C1) and output capacitors(C2) are recommended to use more than 1uF, which can ensure the stability of the system

● PCB Layout

In order to get better use effect, the main points for attention of PCB layout are as follows:

- The input and output capacitors are as close as possible to the chip pins.
- The wiring of VIN and VOUT should be as thick as possible to reduce the wiring resistance and improve the load performance.
- The route from VSS(pin) to VSS uses a dedicated channel to prevent parasitic resistance from introducing into the charge path, which results in incorrect feedback ratio and output error.
